PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of experience across the entire **Software Development Lifecycle**, building scalable **web applications** and **microservices** using **TypeScript, JavaScript, Python, Java**, and **PostgreSQL**. Proficient in designing **RESTful APIs**, **server-side business logic**, **database schemas**, and **client-side React components**. Experienced in **SaaS platforms** running 24/7 on **AWS**, with strong expertise in **microservices architecture**, **asynchronous programming**, **Docker containerization**, and **CI/CD pipelines**. Takes **ownership** of projects end-to-end, passionate about **code quality**, **testing**, and delivering high-value **customer experiences** in collaborative, remote-first environments.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, Python, Java, SQL, C/C++
Backend:	Express, NestJS, Django, SpringBoot, Node.js
Frontend:	React (Components, Hooks), Next.js, HTML/CSS, Responsive Web Applications
Databases:	PostgreSQL, MySQL, DynamoDB, Elasticsearch, Redis
Cloud & DevOps:	AWS (ECS, Step Functions, SQS, S3, CloudWatch), Azure, Docker, Kafka, CI/CD
Testing:	Jest, React Testing Library, pytest, Integration Testing, Debugging
Other:	REST APIs, Microservices Architecture, Asynchronous Programming, fp-ts

EXPERIENCE

System Development Engineer	Nov 2024 – Present
Amazon	Bangalore, India

- Designed and implemented a full-stack automated partner website verification pipeline using **TypeScript**, AWS Step Functions, ECS Fargate, SQS, DynamoDB, and S3 — building both **server-side APIs** and **client-facing React components**.
- Built containerized **web applications** with LLM-powered workflows for scalable content extraction and structured data outputs using **TypeScript** and **fp-ts** for type-safe functional programming patterns.
- Developed **RESTful APIs** and **server-side business logic** using **Express** for partner email link tracking service with click tracking, logging, and metrics aggregation across distributed microservices.
- Created **reusable and modular React components, hooks**, and tests on both front and back end, promoting **code reusability, maintainability, and scalability** across partner screening services.
- Enhanced system **observability and reliability** with centralized logging, custom CloudWatch metrics, and robust **error handling** — performing thorough **testing, debugging, and troubleshooting**.
- Took full **ownership** of features across the **Software Development Lifecycle** — from discovery to deployment — participating in **code reviews** and providing constructive feedback to maintain **code quality standards**.

Tech: TypeScript, fp-ts, Express, React, Python, AWS (Step Functions, ECS, SQS, DynamoDB, S3), Docker, REST APIs

Software Development Engineer	Aug 2023 – Oct 2024
MedikaBazaar	Gurugram, India

- Developed and managed a **SaaS platform** (24/7 uptime) supporting over 2 million products across multiple **microservices** with **PostgreSQL** databases on cloud infrastructure.
- Designed and implemented **server-side APIs**, **data models**, and **business logic** for an approval flow system handling 2M+ products, ensuring a seamless **customer experience**.
- Implemented multi-broker **Kafka** clusters for **asynchronous** event-driven processing, transitioning workloads from RabbitMQ to Kafka for improved throughput.
- Designed and deployed a Notification **Microservice** supporting both synchronous **REST APIs** and **asynchronous messaging** patterns.
- Created and optimized **database schemas**, queries, and interactions with **PostgreSQL** for high-performance data access.
- Built **CI/CD pipelines** and **Dockerized** microservices using **containerization technologies**, improving deployment reliability and scalability.

Tech: Python, Java, PostgreSQL, Kafka, Docker, REST APIs, Microservices Architecture

Software Development Engineer

Apr 2022 – Aug 2023

Fashinza

Gurugram, India

- Optimized **API** performance by **80%** through query optimization, caching strategies, and efficient **database schema** design with **PostgreSQL**.
- Applied design patterns (Builder, Factory) to build **reusable and modular components** increasing codebase efficiency by **30%**, promoting **maintainability and scalability**.
- Developed a Finance **Microservice** with modular architecture for seamless integration and **scalability** across the platform, delivering **high-value outcomes for clients**.
- Performed thorough **testing, debugging, and troubleshooting** — conducted extensive integration and API testing using pytest for **30+ critical endpoints**, ensuring **high-quality deliverables**.
- Built an automated ledger system reducing processing time by **70%** through optimized **database queries** and **business logic**.
- Implemented government invoice registration system with complex **data validation** and third-party **API integrations**, ensuring compliance with E-Invoicing and E-Way services.
- Communicated project progress, challenges, and solutions effectively to **team members and stakeholders**, contributing to **continuous improvement of development processes**.

Tech: Python, Django, PostgreSQL, REST APIs, pytest, Microservices Architecture

EDUCATION

B.Tech in Computer Science

Jun 2017 – Jun 2021

Graphic Era Hill University

Dehradun, Uttarakhand

VOLUNTEER EXPERIENCE

President of Coding Club — *Graphic Era Hill University*

Jun 2019 – Jun 2021

Conducted technical workshops fostering **collaborative learning** and community building in a **cross-functional** team environment.
